Professional Summary

Java Software Engineer with 1.5+ years of experience developing enterprise banking applications for State Bank of India (SBI) at Tech Mahindra. Skilled in Java, Spring Boot, Microservices, REST APIs, Spring Security, Spring Data JPA, Hibernate, and Oracle Database. Experienced in developing scalable backend services, implementing business workflows, and delivering secure, high-performance applications. Familiar with AWS, Docker, Kubernetes, and Apache Kafka.

Experience

Tech Mahindra

Associate Software Engineer

Client: State Bank of India (SBI)

Dec 2024 – Present

Chennai, India

- Developed and maintained backend modules for an internal enterprise banking application using Java, Spring Boot, and Microservices architecture to automate the end-to-end loan recovery process.
- Implemented business workflows covering the complete recovery lifecycle, including NPA identification, legal notice generation, Maker-Checker approval, objection handling, legal proceedings, auction, and re-auction processes.
- Designed and developed RESTful APIs using Spring Boot to support recovery operations, business validations, and secure communication between microservices.
- Implemented business rules and validation logic for recovery case processing, ensuring compliance with banking workflows and approval processes.
- Performed database operations using Spring Data JPA, Hibernate, and Oracle Database while optimizing queries and maintaining data consistency across recovery modules.
- Resolved production issues, implemented new business requirements, and collaborated with cross-functional teams using Git, Maven, and Agile development practices.

Technical Skills

Languages: Java, SQL

Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices

Database: Oracle, MySQL, PostgreSQL

Messaging: Apache Kafka

DevOps: AWS, Docker, Kubernetes

Tools: Git, Maven, Postman, IntelliJ IDEA

Projects

MediFlow – Patient Management System | *Spring Boot, Spring Cloud, Microservices, Docker, JWT, Kafka*

- Built a microservices-based patient management system using Spring Boot and Spring Cloud with Eureka Server, API Gateway, and Config Server for service discovery, centralized configuration, and API routing.
- Secured application workflows using JWT authentication and created RESTful APIs for patient, doctor, and appointment management with Spring Data JPA and Hibernate; integrated Apache Kafka for asynchronous communication and Swagger/OpenAPI for API documentation.

SpiceTales – Restaurant Management System | *Spring Boot, Spring Security, Thymeleaf, MySQL*

- Engineered a role-based restaurant management application supporting Admin, Staff, and Customer workflows with secure authentication and authorization using Spring Security.
- Designed menu management, order processing, and customer tracking modules using Spring Data JPA, Hibernate, and MySQL for efficient data persistence.

Recruitify – Recruitment Management System | *Spring Boot, Spring Security, Thymeleaf, MySQL*

- Created a recruitment management platform to streamline job postings, candidate tracking, application management, and interview scheduling processes.
- Configured role-based access control, CRUD operations, and database persistence using Spring Security, Spring Data JPA, and Hibernate.

Education

Bachelor of Engineering (B.E.) in Computer Science and Engineering

University College of Engineering Nagercoil

2020 – 2024

CGPA: 7.9
